# What You Should Know

Many products in our homes are considered hazardous to use, store, and/or dispose. They pose harmful or toxic risks to humans, animals, and the environment. The level of risk and toxicity varies from product to product. Some products are inherently toxic, while other products contain toxic ingredients. Likewise, some toxins are hazardous in very small amounts and others pose risks by building up in our bodies or the environment. In homes, subtle build up of toxic materials can accumulate in things like indoor air, house dust, and food.

On Cape Cod, toxic materials that seep into our groundwater are of special concern. All drinking water on the Cape, whether supplied by municipal or private well, is fed by groundwater from Cape Cod's Sole Source Aquifer. As the name suggests, the Sole Source Aquifer is the principal source of drinking water in the region and, therefore, should be protected from contamination.

Beyond general risks to humans and the environment, improperly disposed hazardous products pose extraordinary risks to sanitation workers through exposure to toxic fumes and the risk of explosion or fire.

## Please IDENTIFY AND HANDLE HAZARDOUS PRODUCTS RESPONSIBLY

- ✓ Know what is considered hazardous.
- ✓ Read the label. If it says Danger, Poison, Warning, Caution, or Flammable the product is likely to pose a hazardous risk that requires proper use, storage, or disposal.
- ✓ Follow the directions on the label.
- ✓ Seek non-hazardous alternatives.
- ✓ Dispose of hazardous products responsibly.

# Guide to Difficult-to-Manage Waste

All Cape Cod towns are equipped to handle the regular disposal of many household hazardous products. The following lists will guide you in the every-day disposal of these items. Hazardous products not listed below can be disposed of at scheduled Household Hazardous Products Collections in your town. See the HHP Check List for items.

## RECYCLE at Your Local Transfer Station
